How to use this guide

Follow sections 1-11 in order. Each numbered instruction gives you a destination or action. The **Check before leaving** paragraphs are stop signs: resolve missing progress before advancing. Section 12 is the exhaustive room reference; consult the entry for your current room when you want every inspection, connection, gate, and authored reward. Section 13 lists journal objectives verbatim.

- Directions are map directions: north/up, south/down, east/right, west/left. Use the arrows or directional movement controls.
- Room names are followed by internal IDs so you can identify the exact location in screenshots or reports.
- **Talk** means select the NPC and advance through the whole conversation until exploration controls return. Rewards often fire on the final line.
- Use **Menu > Journal** to check quests and **Menu > Items / Party** to inspect supplies, equip compatible gear, and heal. Open **Tinkering** from the field menu when instructed.
- To return to a hub map, walk to that node's entrance first. The game only permits returning from designated entrance rooms. A disabled return control elsewhere is not evidence of a broken quest.
- Never sell or scrap the damaged Cryo-Inductor, Functional Cryo-Inductor, quest proof, badge, Fork, or Chime. Protected items should be excluded, but this route never depends on disposing of them.
- Do not use a stocked debug scenario to judge the campaign economy. For this complete route, start a normal New Game or the Opening scenario.

Save plan

Keep a **pre-Fork save** until you finish World 1. Use a second slot for your latest progress and Quick Save for temporary checks. Save after Wake Up Call, after the shield drill, before the Fork, and before the Warden. Saving to one slot repeatedly destroys your older checkpoint; choose slots deliberately.

What is actually mandatory?

All five main quests are mandatory. **Heavy Lifting** is filed as a side quest, but its shield certification is required for Boggs' mine authorization. Scavenger's Stash, System Flush, Protocol Override, The Lost Shift, the ore-cart vault, and the mine Riot Control Post detour are optional for the main route; this guide completes them.

The lift descent is **not a demonstrated permanent point of no return**. The authored lift has a return connection. Finish upper-colony content first for convenience, rather than because this guide claims it becomes permanently inaccessible. Completing the Fork starts the escape story; finish your completionist sweep before that transition. The navigation console at the end launches the World 2 transition.

1. Wake up, meet Jed, and sweep The Pit

Main quest: Wake Up Call (w1_mq01). Start: Nova's Bunk (pit_nova_bunk).

1. Watch or skip the intro, then wait for the bunk fade to finish. Turn on **bunk light**.
2. Inspect **door control panel** while the light is on. This isolates the conduit and opens the exit. If the panel is unavailable, confirm the light is on; do not turn it off yet.
3. Inspect **bunk** if you want to rest. Resting is optional and restores the party; dismiss its prompt fully.
4. Go **west** to Pod Row (pit_L2_corridor). Inspect **sleeping pods** and **posters**.
5. Go **west** to Supply Closet (pit_storage). Turn on **emergency breaker** before attempting the **loose floor panel**. Inspect the panel for the first VHS tape; also inspect **filter units**. Return **east** to Pod Row.
6. Go **south** to Lift Shaft (pit_shaft). Inspect **ladder** and **pipe**.
7. Go **west** to Jed's Bunk (pit_jed_bunk). Talk to **Jed** until he has told you to visit the workshop and the conversation ends. Inspect **tool case** for spare supplies and **manuals** for lore.
8. Open Items / Party and review the starter kit. The kit event grants Mining Pistol, Nova's Flux Liner, damaged Cryo-Inductor, scrap metal, and a ration. Equip suitable gear through Party if needed; keep the damaged inductor and at least one scrap for its repair.
9. Go **east** to Lift Shaft, then **south** to Pit Landing (pit_L1_landing). The colony map exit becomes available after Jed's briefing. Inspect **bulkhead**, but do not leave yet.
10. Go **east** to Mess Hall (pit_mess). Inspect **broken Hyperion cabinet** to discover the arcade cabinet; this is discovery, not its later repair/install. Inspect the other listed room interactions for lore.
11. Go **east** to Ration Sink (pit_kitchen). Inspect **ingredient hopper** for its one-time supplies and **thermal cooker** for lore. Return **west** to Mess Hall.
12. Go **south** to Vent Crawl (pit_vents). Inspect **maintenance crawl** for the hidden supplies and **grates** for lore.
13. Go **east** to Shared Showers (pit_showers). Inspect **steam valves first**, then **drainage grate**. The valves make the drain loot available. Inspect **tiles**.
14. Return **west** to Vent Crawl, **north** to Mess Hall, **west** to Pit Landing. Return to the hub map and choose **Jed's Workshop**.

Check before leaving: Jed's workshop instruction has fired; your kit is present; you still have the damaged Cryo-Inductor and scrap. Side quest introductions from Scrapper and Doc are not available until Wake Up Call is complete, so do not divert to them yet.

2. Repair the cutter and complete Wake Up Call

Start: Scrap Yard (`workshop_yard`).

1. Inspect **loader diagnostic strip** before fighting. It identifies the Faulted Loader's exposed Shock relay.
2. Defeat the **Faulted Loader**. Use an available Shock action when possible; read the current action description rather than relying on an old guide's damage numbers. Heal before a lethal hit, not after one. Clear the victory and tutorial prompts.
3. Go **north** to Jed's Shutter (`workshop_floor`). Talk to **Jed** if his workshop briefing is available, and finish the conversation.
4. Open **Menu > Tinkering**. Select **Functional Cryo-Inductor**. The authored repair needs **1 damaged Cryo-Inductor + 1 scrap metal**. Select/insert the damaged base and scrap as requested by the interface, then craft once. Check that the functional device appears and Cryo Vent unlocks.
5. Close Tinkering. Inspect **Flux Liner** to patch the suit link and clamp the ground strip.
6. Inspect **mining cutter** to confirm the governor bypass. These actions appear after the inductor repair.
7. Inspect **live cutter test** only after the repair, liner patch, and governor confirmation. Watch the surge and let its callback finish. Talk to Jed afterward if prompted; his directions identify Transit Checkpoint and Zeke's Booth.
8. Open Journal. **Wake Up Call must be complete** and **Shift Clearance must be active**. If not, check the three preparation actions and finish any open cinematic/dialogue.
9. Sweep the workshop before leaving: go **north** to Jed's Office (`workshop_office`), inspect **diagnostic bench drawer** for VHS tape 2, then return **south**.
10. Go **west** to Parts Loft (`workshop_loft`). Loot **mod bench**; inspect **parts** and **shipwright's slide rule**. Return **east**.
11. Go **east** to Tool Shed (`workshop_shed`). Loot **toolbox**. Go **south** to Flooded Basement (`workshop_basement`), turn on **workbench power switch**, then loot **components chest**. Return **north**.
12. Go **east** to Loading Dock (`workshop_dock`), then **east** to Back Alley (`workshop_back`). Loot **salvage dolly**; inspect the remaining lore actions. Return **west, west, west** to Jed's Shutter, then **south** to Scrap Yard.
13. The Loading Dock's **loader / cargo rail** actions are optional Heavy Lifting practice, not the cutter's main quest actions. Do not expect those to certify you before the training quest is active.
14. Save now. Return to the hub map from Scrap Yard and choose **Trade Row**.

Check before leaving: repaired inductor owned, Cryo Vent available, Wake Up Call completed. The new tinkering interface may show fewer components after crafting because you consumed them; do not craft the repair again to chase a missing dialogue step.

3. Complete Scavenger's Stash and sweep Trade Row

Start: Trade Row Gate (trade_entrance).

1. Go **north** to Market Strip (trade_strip), then **north** to Scrapper's Stall (trade_scrapper). Talk to **Scrapper** until **The Scavenger's Stash** (w1_sq01) starts.
2. You may inspect **Contraband** shop. Purchasing is optional; keep useful healing supplies and do not spend quest ingredients just to match a supposed credit benchmark.
3. Go **east** to Cold Locker (trade_locker) and inspect **security locker**. The current authored action opens the cache directly and grants **2 Pulse Grenades + 1 Painkillers**. It is not the old frequency puzzle. Return **west**.
4. Go **south** to Market Strip, then **east** to The Hidden Stash (trade_stash). Open **rebel cache**. Inspect **security field** for context; there is no separate required disarm sequence before the current container interaction.
5. Return **west** to Market Strip, then **north** to Scrapper. Talk through the turn-in: the quest grants **80 XP + 2 Pulse Grenades**, separate from any container contents. Confirm the quest is Completed.
6. Return **south** to Market Strip. Go **west** to Upper Gantry (trade_gantry), inspect every listed action, then return **east**.
7. Go **south** to Trade Row Gate, then **east** to Recyc Bar (trade_bar). Talk to **Miner Bill** and inspect **jukebox** and the other room interactions.
8. Go **east** to Card Den (trade_den), inspect its interactions, then return **west**. Go **south** to Pump Passage (trade_maint), inspect **tuning valve** and any remaining listed actions, then return **north**.
9. Go **west** to Trade Row Gate. Return to the hub map and choose **Med-Bay**.

If Scrapper gives ordinary chatter: check Wake Up Call is complete. If the stash is open but the quest remains active, finish the return conversation rather than reopening the container.

4. Complete System Flush and sweep Med-Bay

Start: Triage Hall (medbay_hall).

1. Go **north** to Doc's Exam Room (medbay_exam1). Talk to **Doc** until **System Flush (w1_sq02)** starts.
2. Go **east** to Med Supply Closet (medbay_storage). Turn on **emergency terminal**, then loot **cryogenic locker**. Return **west**, then **south** to Triage Hall.
3. Heal if needed, then go **east** to Ventilation Hub (medbay_vents). Defeat the **two Siren Skimmers**. Let victory processing finish.
4. Inspect **vent first** to identify the cracked housing. Then use **fans** to reroute airflow. Then clear **toxic blockage**. The order matters; repeatedly tapping the blockage before inspection and airflow does not advance the intended chain.
5. Go **east** to Exhaust Mouth (medbay_exhaust), inspect **vent pipe** and **grate**, then return **west**.
6. Go **west** to Triage Hall, then **north** to Doc. Finish the turn-in: **90 XP + Corrosive Rounds mod**. Inspect the mod in Party/Items and equip it in a compatible unlocked slot if desired.
7. Return **south** to Triage Hall, go **west** to Decon Lock (medbay_decon), then **north** to The Morgue (medbay_morgue). Loot **bio-containment canister** and read **recycling terminal**; inspect **drawers**.
8. Return **south**, then **east** to Triage Hall. Inspect **bio-scanner** and other remaining interactions, then return to the hub map.
9. If you want to heal at Nova's bunk before the next stretch: enter The Pit at Pit Landing, go **north, north, east** to Nova's Bunk, rest, then retrace **west, south, south** to the map exit.
10. Save. Choose **Transit Checkpoint** on the hub map.

Check before leaving: System Flush is Completed. If Doc only reminds you about fumes, inspect the vent, reroute fans, and clear blockage in that order, then talk again.

5. Get Zeke's temporary clearance

Main quest: Shift Clearance (w1_mq02). Start: Shift Queue (checkpoint_queue).

1. Inspect the queue's listed interactions, then go **north** to Search Bay (checkpoint_bay). Talk to **Guard Hank** until Nova's clearance rejection is logged.
2. Go **east** to Zeke's Booth (checkpoint_booth). Talk to **Zeke**, advance to the paperwork choice, and choose **Grid Instability**. Operator Error and Unauthorized Modification are wrong choices; read their feedback and return to the correct choice if offered.
3. Finish the conversation. Check you received the **Mine Access Badge** and Shift Clearance completed.
4. Go **north** to Holding Cell (checkpoint_cell). Loot **mortar seam**, read **graffiti**, and inspect **bench**. Return **south** to Zeke's Booth.
5. Go **west** to Search Bay, **north** to Blast Door A (checkpoint_door), then **north** through Transit Tunnel (checkpoint_tunnel) to **Concourse Lobby** (admin_lobby). Inspect each intermediate room's interactions as you pass.
6. Entering Logistics starts **The Echo** (w1_mq03) if it has not already started. The Transit Checkpoint and Admin Concourse remain connected; you do not need to wait for a new-node animation at every doorway.

If the gate rejects you: finish Hank's rejection first, choose Grid Instability with Zeke, and finish Zeke's final lines. Having visited the booth without completing the override is not enough.

6. Certify Guard Break and get the lift authorized

Start: Concourse Lobby (admin_lobby).

1. Talk to **Foreman Boggs**. His initial review sends you to the shield drill and starts **Heavy Lifting: Required Training (w1_sq03)**. Finish all lines so registration fires.
2. Go **east** to Customer Service (admin_window), then **east** to Security Post (admin_security). Complete the registered **Acoustic Bulwark shield-training fight**. Hydraulic Kick should be unlocked by the drill registration; read its Guard Break description and use it to pressure the shield.
3. If no training fight/ability appears, return **west, west** to Boggs and finish his training reminder, then revisit the Security Post. Inspecting the decorative shield trainer alone is not the certification reward.
4. After victory, check Heavy Lifting is Completed and the training has logged. Its authored reward is **100 XP, Heavy Gear, and Hydraulic Fluid**.
5. Return **west** to Customer Service, then **west** to Concourse Lobby. Talk to **Boggs again**. This second full conversation authorizes the Deep Mine and reveals/unlocks its node. Training victory alone is not the final authorization conversation.
6. Sweep the Concourse: go **north** to Observation Deck (admin_deck), then **north** to Foreman's Office (admin_office); inspect its room actions and return **south**.
7. Go **east** to Information Kiosk (admin_kiosk), then **north** to Staff Lounge (admin_lounge). Use **executive dispenser** and read **datapad**; inspect **chairs**. Return **south** to the kiosk, then **south** to Customer Service and **west** to the lobby. Inspect **call queue terminal** while passing Customer Service.
8. You can optionally revisit Loading Dock via the Homestead map with Heavy Lifting active to try **loader**, then **cargo rail**. This practice route is not required when the Security Post certification is already complete. Do not spend time chasing a second certification payout.
9. Before descending, complete Protocol Override in section 7. Return to a valid map entrance (Admin Concourse's Concourse Lobby) and choose **Server Room** when available. If its node remains inaccessible, inspect the node's lock message and ensure Shift Clearance and Boggs' conversations are complete.

Check before leaving: Heavy Lifting is Completed; Boggs has discussed Sector 4; Deep Mine is revealed/unlocked. The lift still refusing authorization means the Boggs assignment conversation has not fully completed.

7. Complete Protocol Override and sweep Server Room

Start: Air-Lock Entrance (server_airlock).

1. Go **east** to Crawlspace 4 (server_crawl). Use **service junction**, inspect **cables**, then return **west**.
2. Go **north** to Aisle 01 (server_aisle1). Defeat the **two Resonance Buoys**. Inspect the aisle's listed actions afterward.
3. Go **east** to Cooling Unit (server_cooling). Inspect **pipes** and loot **thermal case**; inspect other actions. Return **west**.
4. Go **north** to The Core Hub (server_hub). Use **terminal first**. This starts **Protocol Override (w1_sq04)** and identifies the rebel output warning.
5. Use **console** to thaw/stabilize its controls. This is an exploration interaction; you do not need to fire a combat ability at the console.
6. Read **output ports**. Then use **terminal again** to open the routing choices.
7. Choose **Write to the removable circuit board**. The maintenance network and supervisor-account choices are audited wrong routes; they do not complete the correct extraction. If you chose one, reconnect to the terminal and choose the board.
8. Finish the resulting message/cinematic. Check Protocol Override is Completed and you received **Circuit Board + 110 XP**.
9. Go **west** to Backup Storage (server_backup). Turn on **backup breaker box**; read **archive terminal** and loot **cases**. Return **east**.
10. Go **east** to Admin Office (server_office). Read **executive terminal** and **audit datapads**, then return **west** to the Core Hub.
11. Return **south** to Aisle 01 and **south** to Air-Lock Entrance. Return to the map, then return to the Concourse Lobby.

If nothing happens at the terminal: first contact starts the quest; the console must then be thawed; a second terminal interaction opens routing. The reward is on the board choice, not on merely locating or warming the terminal.

8. Descend, restore power, and complete The Lost Shift

Start: Concourse Lobby (admin_lobby).

1. Verify sections 3, 4, 6, and 7 are complete. Heal and save.
2. Go **west** to Elevator Lobby (admin_elevator). Inspect **warning signs**, **scanner**, and **cables**. Choose **Plan mine descent** (the named north travel interaction). On the first authorized descent, the Logistics map reveals **Deep Mine**. Select Deep Mine and enter it. On a later descent the named action may instead say **Enter Deep Mine** and use the continuous room route.
3. You should arrive at **Elevator Landing** (mine_landing). Inspect **lift**, **beacons**, and **machinery**. **Drain pool fishing is locked in the normal World 1 route**: it requires the World 2 pod-examination fishing kit. Do not hunt for a World 1 rod to clear this gate.
4. Go **north** to Main Tunnel Alpha (mine_alpha). Defeat its **two Echo Borers**. The mine's first-encounter objective is checked here, not by a made-up fight at the empty landing.
5. Go **north** to Cavern Junction (mine_junction). Use **junction breaker box > Restore power**. Leave it on. This lights the deeper mine and exposes the Side Shunt datapad.
6. Backtrack **south** to Main Tunnel Alpha, then **east** to Side Shunt 4 (mine_shunt). Entering after power is restored starts **The Lost Shift** (w1_sq05).
7. Read **crew datapad**, finish the letter/cinematic, and check the quest completes. The authored reward is **Recoil Dampener + Crew Datapad + 120 XP**.
8. Inspect **resonant vein** for its one-time resource, plus **crates** and **support beams** for lore.
9. Return **west** to Main Tunnel Alpha, then **north** to Cavern Junction. Continue with its optional branches below.

If the datapad is missing: return to the junction and turn power on, then leave/re-enter Side Shunt. Its quest starts on entry with power restored. Inspecting the shunt before the breaker does not satisfy that entry condition.

9. Breach the ore-cart vault and finish the mine sweep

Start: Cavern Junction (mine_junction).

1. Inspect **switch rails**. The clue distinguishes the occupied checkpoint line from the western bulkhead siding.
2. Use **track diverter lever > Divert Track West**. Do not toggle it back to Reset Track Switch.
3. Use **wheel brake** to release the cart. The breach requires the west track setting; the cart does not roll just because you moved the lever.
4. Go **west** into Sealed Munitions Stash (mine_sealed_munitions_vault). Open **dominion munitions cache** for **Thermite Core Mod, Scrap Metal, and Pure Iron**; inspect **shattered ore cart**. Return **east** to the junction.
5. For the completionist detour, go **north** to Riot Control Post (mine_checkpoint). Defeat **Acoustic Bulwark + Dominion Dampener**. Pressure the Guard and deal with the support enemy rather than spending every heavy attack into an intact shield.
6. Go **west** to Toxic Pocket (mine_gas), inspect **pipe**, then return **east, south** to the junction. This fight is optional; the main route goes east.
7. Go **east** to Conveyor Belt (mine_conveyor), inspect **conveyor belt** and **motor**, then **north** to Ore Sifter (mine_sifter). Inspect **machinery, dust, and strobes**.
8. Go **north** to Deep Shoring (mine_shoring), inspect **support beams** and **debris**, then **north** to Ancient Threshold (mine_threshold). Inspect **geometry** and **walls**.
9. Go **west** to The Long Slope (mine_slope), inspect **pillar**, then **north** to Echo Antechamber (mine_antechamber). Inspect **ceiling** and **stone**.
10. Go **north** to Geometric Gap (echo_gap), inspect **stone** and **line**, then **north** to Silent Walkway (echo_walkway). Inspect **walls** and **fractals**.
11. Go **north** to The Heart (echo_heart). Do not engage the Fork yet. The Harmonic Well to the east and Signal Alcove to the west may be dark before synchronization; leave their inspections until the Fork has lit them in section 10.
12. Inspect **geometry** in The Heart. Make your pre-Fork save in a dedicated slot. Use the checklist below before continuing.

Pre-Fork completion checklist

- Wake Up Call and Shift Clearance completed.
- Scavenger's Stash, System Flush, Heavy Lifting, Protocol Override, and The Lost Shift completed.
- Pit/workshop VHS tapes collected; arcade cabinet discovery recorded.
- All wanted one-time caches and lore read (use section 12).
- Cart vault opened and looted; Riot Control Post detour completed if following 100% room coverage.
- Party healed, equipment reviewed, useful healing items and grenades retained.
- Pre-Fork save preserved. Do not overwrite it with your escape checkpoint.

10. Counter-Tune the Fork and follow Red Alert

1. In **The Heart**, select **tuning fork**. The panel is **Counter-Tune the Fork**, with one active control at a time and a visual waveform. Sound is helpful atmosphere, not required for the solution.
2. **Find the pulse:** adjust Phase Sweep until the cutter peaks align with the Fork's repeating peaks. Select **Hold sweep** when enabled. The authored target is **87 kHz**, tolerance **2 kHz**; the control may emphasize visual feedback rather than showing a numeric value.
3. **Balance the cold loop:** adjust the wave height to match the reference. Select **Hold cold loop** when enabled. Target **68%**, tolerance **3 percentage points**.
4. **Quiet the feedback:** turn Ground Phase until the two traces oppose and the lower combined trace becomes flat. Select **Engage handshake** when enabled. Target **180 degrees**, tolerance **6 degrees**.
5. If a confirmation button is disabled, adjust the current control into tolerance; tapping a disabled button cannot advance. Earlier held steps stabilize at their accepted center. Use Previous Step if you need to revisit a stage.
6. Let the sync cinematic and reward processing finish. **The Echo** (w1_mq03) completes, **Red Alert** (w1_mq04) begins, and the Fork is recovered. Its completion reward is **150 XP, the Tuning Fork, 2 Medkit I, and 2 rations**, plus **Blast Wave**. The calibration consumes the **Functional Cryo-Inductor**; its disappearance here is intentional, not lost loot. Before leaving The Heart, sweep **east** into The Harmonic Well and inspect **mist**, return **west**, then **west** into Signal Alcove and inspect **walls/static**, and return **east**. These rooms are lit by the successful sync. Do not assume the emergency exit is open before the handshake succeeds.
7. Go **north** to Emergency Exit (echo_exit). Inspect **maintenance tunnel** and dismiss Zeke's comms narration.
8. Go **north** to Maintenance Access (launch_access). Defeat **Siren Skimmer + Echo Borer**; dismiss victory and narrative prompts.
9. Before proceeding north, take the optional room sweep: **east** to Gantry Level 1 (launch_gantry), inspect **gantries/drums**, **south** to Refueling Bay (launch_fuel), inspect **propellant/hose**, then return **north, west** to Maintenance Access.
10. Go **north** to Cargo Lift (launch_lift). Defeat **Acoustic Bulwark + Resonance Buoy**. This is the fight that advances the escape gauntlet stage.
11. **Talk to Jed after clearing the lift.** Finish his sacrifice/handoff conversation. It grants **Jed's Chime (Ghost Signal Cell)**, a Medkit, rations, and **150 XP**; Red Alert completes and **The Launch** (w1_mq05) begins.
12. Inspect **override panel** and **hydraulics** for context. Use **cargo lift** rest interaction to recover before the checkpoint. Save in your current-progress slot, keeping the pre-Fork slot intact.

If the lift stage does not advance: the Cargo Lift encounter must be cleared, and Jed's conversation must finish. The Chime is a handoff from Jed; it is not obtained by inspecting the override panel. Do not leave without it.

11. Defeat the Warden, splice the Chime, and launch

1. From Cargo Lift, go **north** to Security Checkpoint B (launch_checkpoint). Defeat **Dominion Dampener + Resonance Buoy**. Inspect **checkpoint** and **floodlights** after the encounter.
2. Heal, then go **north** to Pod Bay (launch_bay). The Iron Warden's arrival advances the main quest to its boss stage.
3. Talk to **Zeke before the fight** if you want to check his contextual warning. He should talk about the Warden/Pod Bay, not warn you about the old booth's audio recording. This conversation does not splice the Chime while the Warden is undefeated.
4. Save before committing to the fight if the menu is available. Fight **The Iron Warden**. Cryo Vent's Brittle setup followed by physical attacks and Guard-pressure actions is a useful plan; use the actual action descriptions. Keep healing ready and avoid wasting heavy actions into an intact Guard. Treat numeric damage/HP in older guides as unverified.
5. Finish victory processing. Check the Warden is defeated and the quest now asks for the launch-pod steps.
6. **Talk to Zeke in Pod Bay after victory**. Finish the directions so he sends you into The Pod Core. This is the first conversation of a two-room handoff.
7. Go **north** to **The Pod Core** (launch_pod). **Talk to Zeke again here** and finish the splice conversation. It consumes the Ghost Signal Cell, records the Chime splice, and adds Zeke to the party. Merely moving into the room does not splice it.
8. Inspect **pod** and **speaker** if desired. Use **navigation console** only after the splice. This is the launch action; it is not a second puzzle and talking to Zeke alone does not launch.
9. Watch or skip the launch/crash cinematic, then allow transition processing to finish. You should arrive at **Sector 9 Crash Site** (sector9_crash_site), World 2.
10. Check **The Launch is Completed, A Strange Coast** (w2_mq01) **is active**, and Zeke is in the party. Save after arrival. Stop here for the World 1 walkthrough.

If the console says locked: return to Pod Bay for Zeke's post-Warden directions if necessary, then talk to him in The Pod Core. Verify the Chime splice objective, not just possession of the Chime. If the world transition stalls, finish/dismiss the cinematic rather than repeatedly selecting the console.

12. Exhaustive room reference

Use this section to finish every side inspection, cache, and lore interaction. Connections below are authored map links, not a guarantee that every link is currently unlocked. Gate requirements and action prerequisites are included. A repeated loot interaction should not pay again.

The Pit - entry: Pit Landing (pit_L1_landing)

Pit Landing (pit_L1_landing)

- **Exits:** North to Lift Shaft (pit_shaft); East to Mess Hall (pit_mess).
- **bulkhead:** Inspect/select this action. In-room feedback: Standard Dominion seal. It won't open until the shift-change siren sounds.

Lift Shaft (pit_shaft)

- **Exits:** South to Pit Landing (pit_L1_landing); North to Pod Row (pit_L2_corridor); West to Jed's Bunk (pit_jed_bunk).
- **ladder:** Inspect/select this action. In-room feedback: Rusted and slick with condensation. Watch your step.
- **pipe:** Inspect/select this action. In-room feedback: The steam is hot and smells like old copper.

Pod Row (pit_L2_corridor)

- **Exits:** South to Lift Shaft (pit_shaft); East to Nova's Bunk (pit_nova_bunk); West to Supply Closet (pit_storage).
- **sleeping pods:** Inspect/select this action. In-room feedback: Most doors carry a name, a shift code, and a repair tally.
- **posters:** Inspect/select this action. In-room feedback: The faces of the 'Founders' are faded and covered in grease stains.

Nova's Bunk (pit_nova_bunk)

- **Exits:** West to Pod Row (pit_L2_corridor).
- **West gate:** Nova needs the bunk light on and the door opened before she can leave. Required state: pit_nova_bunk: light_on = True; pit_nova_bunk: conduit_isolated = True.
- **bunk light:** Toggle: Turn on / Turn off. Leave the relevant light or power on while exploring. In-room feedback: The wall switch is cold under your fingers.
- **door control panel:** Inspect/select this action. Requires: ms_w1_mq01_fault_visible. Appears with room state: light_on. Hides after room state: conduit_isolated. In-room feedback: Turn on the bunk light to see the door controls.
- **bunk:** Rest/recovery interaction; finish or dismiss its prompt before moving.

Supply Closet (pit_storage)

- **Exits:** East to Pod Row (pit_L2_corridor).
- **emergency breaker:** Toggle: Flip switch / Flip switch. Leave the relevant light or power on while exploring.
- **loose floor panel:** Inspect/select this action. One-time until: ms_tape_01_found. Authored outcomes (when event gates are met): 1 x Film 01: Unpayable Debt. In-room feedback: The floor panel has already been pried open and emptied.
- **filter units:** Inspect/select this action. In-room feedback: Heavy particulate filters clogged with rock dust.

Jed's Bunk (pit_jed_bunk)

- **Exits:** East to Lift Shaft (pit_shaft).
- **manuals:** Inspect/select this action. In-room feedback: 'Advanced Hydraulics' and 'Ship Engine Maintenance'. They are well-thumbed.
- **tool case:** Inspect/select this action. One-time until: ms_w1_jed_bunk_tools_looted. Authored outcomes (when event gates are met): 1 x Wiring Bundle; 1 x Battery Pack. In-room feedback: Jed's tool case is neatly organized, with spare components collected.

Mess Hall (pit_mess)

- **Exits:** West to Pit Landing (pit_L1_landing); East to Ration Sink (pit_kitchen); South to Vent Crawl (pit_vents).
- **monitor:** Inspect/select this action. In-room feedback: 'YOUR SHIFT IS YOUR CONTRIBUTION.' The screen is spider-webbed with cracks.
- **broken Hyperion cabinet:** Inspect/select this action. Hides after: ms_arcade_deep_mine_discovered. In-room feedback: A dead pre-Dominion arcade cabinet leans beneath a miner's coat. One amber diagnostic blinks behind the cracked glass.
- **tables:** Rest/recovery interaction; finish or dismiss its prompt before moving.
- **ceramic rooster:** Inspect/select this action. A hand-painted ceramic rooster proudly perches on the shelf above the mess counter. Placed there by Gaga to add some feisty country pride to the cold subterranean rock.
- **vintage mystery monitor:** Inspect/select this action. A retro amber CRT playing archived broadcasts of 'Cosmic Enigmas' with haunting synth music. A faded note beside an old recipe card reads: 'In memory of Nana Jessie — I hated cooking every meal, but I loved you kids too much to let you eat slop. Give Ashley a biscuit.'

Ration Sink (pit_kitchen)

- **Exits:** West to Mess Hall (pit_mess).
- **thermal cooker:** Inspect/select this action. In-room feedback: The industrial cooker hums with lukewarm colony broth. Cook Rourke glares if anyone touches the regulator valve.
- **ingredient hopper:** Inspect/select this action. One-time until: ms_w1_kitchen_hopper_looted. Authored outcomes (when event gates are met): 2 x Herb. In-room feedback: The ingredient hopper is scraped clean.

Vent Crawl (pit_vents)

- **Exits:** North to Mess Hall (pit_mess); East to Shared Showers (pit_showers).
- **maintenance crawl:** Inspect/select this action. One-time until: ms_w1_pit_vents_looted. Authored outcomes (when event gates are met): 1 x Ballistic Weave; 1 x Pulse Grenade. In-room feedback: The maintenance crawlspace is clear.
- **grates:** Inspect/select this action. In-room feedback: Bolted shut, but the gaps are wide enough to peer through.

Shared Showers (pit_showers)

- **Exits:** West to Vent Crawl (pit_vents).
- **steam valves:** Inspect/select this action. One-time until: ms_w1_pit_showers_tuned. In-room feedback: The steam valves have been adjusted to a safe pressure.
- **drainage grate:** Inspect/select this action. Requires: ms_w1_pit_showers_tuned. One-time until: ms_w1_pit_showers_looted. Authored outcomes (when event gates are met): 2 x Scrap Metal. In-room feedback: The drain trap is empty.
- **tiles:** Inspect/select this action. In-room feedback: Orange rust stains cut across the lime-scaled ceramic tiles.

Jed's Workshop - entry: Scrap Yard (workshop_yard)

Scrap Yard (workshop_yard)

- **Exits:** North to Jed's Shutter (workshop_floor).
- **Authored enemies:** faulted_loader. Moving enemies can make the actual encounter timing differ from the static room list.
- **North gate:** The loader's wild arm blocks the workshop shutter. Tap the Faulted Loader to engage in combat!
- **loader diagnostic strip:** Inspect/select this action. In-room feedback: The strip flashes SAFETY GOVERNOR BYPASSED beside the cracked relay.
- **scrap:** Inspect/select this action. In-room feedback: Twisted girders and hulls from a dozen different ship classes. Jed never throws anything away.
- **shutter:** Inspect/select this action. In-room feedback: The motor is old and loud, but it keeps the Dominion inspectors out.

Jed's Shutter (workshop_floor)

- **Exits:** South to Scrap Yard (workshop_yard); North to Jed's Office (workshop_office); East to Tool Shed (workshop_shed); West to Parts Loft (workshop_loft).
- **mining cutter:** Inspect/select this action. Appears after: ms_w1_mq01_cryo_repaired. In-room feedback: The factory governor blocks the sweep Nova needs for quota. The bypass lead is exposed and waiting for her confirmation.
- **Flux Liner:** Inspect/select this action. Appears after: ms_w1_mq01_cryo_repaired. Authored outcomes (when event gates are met): 1 x Flux Liner. In-room feedback: Patch the suit link and clamp the sacrificial strip to the floor ground.
- **live cutter test:** Inspect/select this action. Appears after: ms_w1_mq01_cryo_repaired. Hides after room state: cutter_surge_complete. Authored outcomes (when event gates are met): 2 x Ration Pack; 1 x Medkit I; 50 XP; Complete w1_mq01; Start w1_mq02; Open Jed dialogue. In-room feedback: Cold loop 68%. Liner grounded. Governor bypass confirmed. Fire one sweep.

Jed's Office (workshop_office)

- **Exits:** South to Jed's Shutter (workshop_floor).
- **screens:** Inspect/select this action. In-room feedback: Flickering CRTs displaying local sensor feeds and shipment manifests.
- **schematics:** Inspect/select this action. In-room feedback: Jed's own hand-drawn plans for engine modifications. They're more art than engineering.
- **chair:** Inspect/select this action. In-room feedback: Smells like machine oil and Jed's cheap tobacco.
- **diagnostic bench drawer:** Inspect/select this action. Authored outcomes (when event gates are met): 1 x Film 02: Memories of Another Life. In-room feedback: An old diagnostic bench with a sealed drawer.

Parts Loft (workshop_loft)

- **Exits:** East to Jed's Shutter (workshop_floor).
- **mod bench:** Inspect/select this action. One-time until: ms_w1_workshop_loft_looted. Authored outcomes (when event gates are met): 1 x Precision Sight; 2 x Scrap Metal. In-room feedback: Jed's loft mod bench is clean.
- **parts:** Inspect/select this action. In-room feedback: Sorted coils, solder spools, and high-tensile fasteners.
- **shipwright's slide rule:** Inspect/select this action. A precision calculating slide rule engraved: 'C. Thomas — Master Shipwright & Marine Engineer'. Beside it lie handwritten hull stress calculations and a postcard from Paris. A note in the leather case reads: 'Math is honest, steel holds true, and family is everything.'

Tool Shed (workshop_shed)

- **Exits:** West to Jed's Shutter (workshop_floor); South to Flooded Basement (workshop_basement); East to Loading Dock (workshop_dock).
- **tools:** Inspect/select this action. In-room feedback: Wrenches, soldering irons, and pry-bars. All kept in better condition than Jed himself.
- **toolbox:** Inspect/select this action. One-time until: ms_w1_workshop_shed_looted. Authored outcomes (when event gates are met): 1 x Hydraulic Fluid; 2 x Scrap Metal. In-room feedback: Jed's spare toolbox has already been sorted.

Flooded Basement (workshop_basement)

- **Exits:** North to Tool Shed (workshop_shed).
- **workbench power switch:** Toggle: Power on / Power off. Leave the relevant light or power on while exploring.
- **components chest:** Inspect/select this action. One-time until: ms_w1_workshop_basement_looted. Authored outcomes (when event gates are met): 2 x Wiring Bundle; 1 x Battery Pack; 3 x Scrap Metal. In-room feedback: Jed's components chest is empty.

Loading Dock (workshop_dock)

- **Exits:** West to Tool Shed (workshop_shed); East to Back Alley (workshop_back).
- **cargo rail:** Inspect/select this action. Authored outcomes (when event gates are met): Unlock nova_hydraulic_kick. In-room feedback: The loader shoves the cargo along the rail, clearing enough space for the trapped workers to breathe.
- **loader:** Inspect/select this action. In-room feedback: The loader coughs awake with enough hydraulic force to move a wall.
- **scrap:** Inspect/select this action. In-room feedback: A fresh delivery of salvaged engine parts, still warm from use.

Back Alley (workshop_back)

- **Exits:** West to Loading Dock (workshop_dock).
- **salvage dolly:** Inspect/select this action. One-time until: ms_w1_workshop_back_looted. Authored outcomes (when event gates are met): 1 x Armor Plate; 3 x Scrap Metal. In-room feedback: The salvage dolly has been cleared.
- **scrap plates:** Inspect/select this action. In-room feedback: Heavy reinforced bulkheads salvaged from decommissioned haulers.

Med-Bay - entry: Triage Hall (medbay_hall)

Triage Hall (medbay_hall)

- **Exits:** North to Doc's Exam Room (medbay_exam1); West to Decon Lock (medbay_decon); East to Ventilation Hub (medbay_vents).
- **lights:** Inspect/select this action. In-room feedback: They buzz and flicker, casting long, sickly shadows across the hall.
- **bio-scanner:** Inspect/select this action. In-room feedback: An older model, struggling to process the sheer volume of cases.

Doc's Exam Room (medbay_exam1)

- **Exits:** South to Triage Hall (medbay_hall); East to Med Supply Closet (medbay_storage).
- **monitor:** Inspect/select this action. In-room feedback: The display is covered in status errors. Dominion's latest update seems to have broken the diagnostic tools.

Med Supply Closet (medbay_storage)

- **Exits:** West to Doc's Exam Room (medbay_exam1).
- **emergency terminal:** Toggle: Reboot terminal / Standby terminal. Leave the relevant light or power on while exploring.
- **cryogenic locker:** Inspect/select this action. One-time until: ms_w1_medbay_storage_looted. Authored outcomes (when event gates are met): 2 x Medkit I; 1 x Neural Stabilizer; 1 x Chemical Catalyst. In-room feedback: The cryogenic locker has been cleaned out.
- **supplies:** Inspect/select this action. In-room feedback: Expired antiseptic packets and rationed field dressings.

Ventilation Hub (medbay_vents)

- **Exits:** West to Triage Hall (medbay_hall); East to Exhaust Mouth (medbay_exhaust).
- **Authored enemies:** siren_skimmer, siren_skimmer. Moving enemies can make the actual encounter timing differ from the static room list.
- **fans:** Inspect/select this action. In-room feedback: The fans cough and stutter, shoving pressure through the wrong part of the vent line.
- **vent:** Inspect/select this action. In-room feedback: The cracked vent is leaking poison because pressure is backed up behind the fans.
- **toxic blockage:** Inspect/select this action. In-room feedback: The toxic blockage pulses in the redirected updraft, close enough to clear if the airflow is stable.

Exhaust Mouth (medbay_exhaust)

- **Exits:** West to Ventilation Hub (medbay_vents).
- **vent pipe:** Inspect/select this action. In-room feedback: The scale of the mining operation is breathtaking... and terrifying.
- **grate:** Inspect/select this action. In-room feedback: Bolted firmly into the canyon wall. No way out through here.

Decon Lock (medbay_decon)

- **Exits:** East to Triage Hall (medbay_hall); North to The Morgue (medbay_morgue).
- **nozzles:** Inspect/select this action. In-room feedback: Ready to spray. Just don't breathe while the sterilant is active.
- **sterilant:** Inspect/select this action. In-room feedback: A chemical that can strip the paint off a ship and the skin off a miner.

The Morgue (medbay_morgue)

- **Exits:** South to Decon Lock (medbay_decon).
- **bio-containment canister:** Inspect/select this action. One-time until: ms_w1_medbay_morgue_looted. Authored outcomes (when event gates are met): 1 x Adrenaline Ampoule; 1 x Neural Stabilizer. In-room feedback: The bio-containment canister is empty.
- **recycling terminal:** Inspect/select this action. In-room feedback: Dominion Reclamation Protocol: 'Biomass recovery target: 94.2% per cycle.'
- **drawers:** Inspect/select this action. In-room feedback: Numbered cryogenic drawers stamped with asset barcodes.

Trade Row - entry: Trade Row Gate (trade_entrance)

Trade Row Gate (trade_entrance)

- **Exits:** North to Market Strip (trade_strip); East to Recyc Bar (trade_bar).
- **signs:** Inspect/select this action. In-room feedback: They advertise everything from black-market rations to illegal engine mods.
- **archway:** Inspect/select this action. In-room feedback: Bolted directly into the canyon wall, it marks the boundary of the 'official' colony.

Market Strip (trade_strip)

- **Exits:** South to Trade Row Gate (trade_entrance); North to Scrapper's Stall (trade_scrapper); East to The Hidden Stash (trade_stash); West to Upper Gantry (trade_gantry).
- **stalls:** Inspect/select this action. In-room feedback: A chaotic collection of tents and crates where anything can be bought for the right price.
- **power cells:** Inspect/select this action. In-room feedback: Standard issue cells with the Dominion logos scratched off.

Scrapper's Stall (trade_scrapper)

- **Exits:** South to Market Strip (trade_strip); East to Cold Locker (trade_locker).
- **datapad:** Inspect/select this action. In-room feedback: Encrypted and password-protected. Scrapper's ledger lists black-market contraband serial numbers.
- **Contraband:** Open shop scrappers_contraband; purchases are optional.

The Hidden Stash (trade_stash)

- **Exits:** West to Market Strip (trade_strip).
- **rebel cache:** Open the container once. Contents: Pulse Grenade.
- **security field:** Inspect/select this action. In-room feedback: A basic damping field to hide the contents from corporate scanners.

Recyc Bar (trade_bar)

- **Exits:** West to Trade Row Gate (trade_entrance); East to Card Den (trade_den); South to Pump Passage (trade_maint).
- **glasses:** Inspect/select this action. In-room feedback: Cloudy and chipped. The recyc-whiskey probably does most of the cleaning.
- **jukebox:** Inspect/select this action. In-room feedback: It skips every few beats, making the singer sound like they're hiccuping.

Card Den (trade_den)

- **Exits:** West to Recyc Bar (trade_bar).
- **dice table:** Inspect/select this action. Hides after: ms_w1_trade_den_gambled. In-room feedback: Miners roll dice across the scratched felt.
- **card games:** Inspect/select this action. In-room feedback: Holo-cards dealing bad odds with bright, cheerful animations.

Cold Locker (trade_locker)

- **Exits:** West to Scrapper's Stall (trade_scrapper).
- **security locker:** Inspect/select this action. One-time until: ms_w1_trade_locker_unlocked. Authored outcomes (when event gates are met): 2 x Pulse Grenade; 1 x Neural Stabilizer. In-room feedback: The security locker door hangs open.
- **scanner:** Inspect/select this action. In-room feedback: An amber Dominion biometric scanner monitoring unauthorized access.

Upper Gantry (trade_gantry)

- **Exits:** East to Market Strip (trade_strip).
- **crane crate:** Inspect/select this action. One-time until: ms_w1_trade_gantry_looted. Authored outcomes (when event gates are met): 1 x Ballistic Weave; 1 x Battery Pack. In-room feedback: The crane crate has been looted.
- **railings:** Inspect/select this action. In-room feedback: A panoramic view of Trade Row's sprawling stalls and glowing neon signs.

Pump Passage (trade_maint)

- **Exits:** North to Recyc Bar (trade_bar).
- **tuning valve:** Inspect/select this action. One-time until: ms_w1_trade_maint_tuned. Authored outcomes (when event gates are met): 2 x Heavy Gear; 1 x Hydraulic Fluid. In-room feedback: The pump frequency is balanced and running smoothly.
- **pumps:** Inspect/select this action. In-room feedback: Heavy wastewater pumps cycling graywater through the colony filtration loop.

Transit Checkpoint - entry: Shift Queue (checkpoint_queue)

Shift Queue (checkpoint_queue)

- **Exits:** North to Search Bay (checkpoint_bay).
- **contraband bin:** Inspect/select this action. One-time until: ms_w1_checkpoint_queue_looted. Authored outcomes (when event gates are met): 2 x Ration Pack; 1 x Battery. In-room feedback: The contraband bin is empty.
- **lights:** Inspect/select this action. In-room feedback: Harsh fluorescent floodlights bleaching color from the corridor.

Search Bay (checkpoint_bay)

- **Exits:** South to Shift Queue (checkpoint_queue); North to Blast Door A (checkpoint_door); East to Zeke's Booth (checkpoint_booth).
- **arches:** Inspect/select this action. In-room feedback: Dominion biometric scanners. They're looking for contraband and 'unauthorized biological anomalies'.
- **counter:** Inspect/select this action. In-room feedback: Scratched and dented, built to withstand the weight of a hundred mining rigs a day.

Zeke's Booth (checkpoint_booth)

- **Exits:** West to Search Bay (checkpoint_bay); North to Holding Cell (checkpoint_cell).
- **window:** Inspect/select this action. In-room feedback: Smudged with fingerprints and covered in corporate status icons.
- **speaker:** Inspect/select this action. In-room feedback: A cheap, buzzing intercom. It's the only way to talk to the clerks.

Holding Cell (checkpoint_cell)

- **Exits:** South to Zeke's Booth (checkpoint_booth).
- **mortar seam:** Inspect/select this action. One-time until: ms_w1_checkpoint_cell_looted. Authored outcomes (when event gates are met): 1 x Digital Watch. In-room feedback: The hollow seam in the mortar is empty.
- **graffiti:** Inspect/select this action. In-room feedback: 'If you reach Sector 4, follow the blue cables — not the signs.'
- **bench:** Inspect/select this action. In-room feedback: Cold stamped steel bolted into the bedrock.

Blast Door A (checkpoint_door)

- **Exits:** South to Search Bay (checkpoint_bay); North to Transit Tunnel (checkpoint_tunnel).
- **North gate:** The blast door rejects your clearance. You need a valid Mine Access Badge.
- **blast door:** Inspect/select this action. In-room feedback: Three meters of solid steel. You aren't getting through this without authorization.
- **console:** Inspect/select this action. In-room feedback: Access Denied. Liability score exceeds shift parameters.

Transit Tunnel (checkpoint_tunnel)

- **Exits:** South to Blast Door A (checkpoint_door); North to Concourse Lobby (admin_lobby).
- **walkway:** Inspect/select this action. In-room feedback: The belt moves at a fixed shift-change pace and has no stop control on this side.

Admin Concourse - entry: Concourse Lobby (admin_lobby)

Concourse Lobby (admin_lobby)

- **Exits:** South to Transit Tunnel (checkpoint_tunnel); North to Observation Deck (admin_deck); East to Customer Service (admin_window); West to Elevator Lobby (admin_elevator).
- **windows:** Inspect/select this action. In-room feedback: Orange work lights mark each drill cage below. Nova's temporary badge now routes her toward Sector 4.

Observation Deck (admin_deck)

- **Exits:** South to Concourse Lobby (admin_lobby); North to Foreman's Office (admin_office); East to Information Kiosk (admin_kiosk).
- **railings:** Inspect/select this action. In-room feedback: Reinforced glass. It's the only thing between you and a very long fall.
- **kiosks:** Inspect/select this action. In-room feedback: They're comparing current output to the 'Optimal Asset Model'. You aren't meeting the curve.

Customer Service (admin_window)

- **Exits:** West to Concourse Lobby (admin_lobby); North to Information Kiosk (admin_kiosk); East to Security Post (admin_security).
- **booths:** Inspect/select this action. In-room feedback: Each booth is a small island of corporate authority.
- **badges:** Inspect/select this action. In-room feedback: Each verified badge produces the same soft chime.
- **call queue terminal:** Inspect/select this action. A monitor blinks: 'HOLD QUEUE: 42 CALLERS WAITING. AVERAGE HANDLE TIME: EXCEEDED.' Beside it sits a headset and a worn troubleshooting flowchart: 'Did you reboot the modem? Escalate to

supervisor.' Nova shudders—she would rather mine pure bedrock with her bare hands than work customer service.

Foreman's Office (admin_office)

- **Exits:** South to Observation Deck (admin_deck).
- **server racks:** Inspect/select this action. In-room feedback: They store the data for every ounce of ore moved in this sector.
- **map:** Inspect/select this action. In-room feedback: The map traces power, freight, and worker traffic through Logistics.

Information Kiosk (admin_kiosk)

- **Exits:** West to Observation Deck (admin_deck); South to Customer Service (admin_window); North to Staff Lounge (admin_lounge).
- **terminal:** Inspect/select this action. In-room feedback: A high-end interface, much better than the ones in the Homestead.
- **screen:** Inspect/select this action. In-room feedback: You look tired. The corporate overlay says you're '94% Efficient'.

Staff Lounge (admin_lounge)

- **Exits:** South to Information Kiosk (admin_kiosk).
- **executive dispenser:** Inspect/select this action. Authored outcomes (when event gates are met): 1 x Black Coffee. In-room feedback: The executive dispenser whirs softly as it recharges its heating coil.
- **datapad:** Inspect/select this action. In-room feedback: Dominion memo: 'Sub-quota personnel recycling schedule approved for Q3.'
- **chairs:** Inspect/select this action. In-room feedback: Real leather. A single chair here costs more than three years of mining scrip.

Elevator Lobby (admin_elevator)

- **Exits:** East to Concourse Lobby (admin_lobby); North to Elevator Landing (mine_landing).
- **North gate:** The retinal scanner flashes red: Access Denied. The lift controls won't unlock until Foreman Boggs authorizes your deep mine descent. Required state: admin_lobby: bogs_talked = True.
- **warning signs:** Inspect/select this action. In-room feedback: 'NO UNAUTHORIZED DESCENT. BIOLOGICAL HAZARD DETECTED.'
- **scanner:** Inspect/select this action. In-room feedback: A retinal scanner. It does not care whether Boggs is sending you to work or to disappear.
- **cables:** Inspect/select this action. In-room feedback: Thick, grease-covered bundles of braided steel.

Security Post (admin_security)

- **Exits:** West to Customer Service (admin_window).
- **Authored enemies:** acoustic_bulwark. Moving enemies can make the actual encounter timing differ from the static room list.
- **shield trainer:** Inspect/select this action. In-room feedback: A reinforced Dominion riot shield drill frame used for mandatory guard certification.
- **monitors:** Inspect/select this action. In-room feedback: They show camera feeds from every hallway in the sector.
- **racks:** Inspect/select this action. In-room feedback: Racks for stun-batons and riot shields around the training frame.

Server Room - entry: Air-Lock Entrance (server_airlock)

Air-Lock Entrance (server_airlock)

- **Exits:** North to Aisle 01 (server_aisle1); East to Crawlspace 4 (server_crawl).
- **emergency locker:** Inspect/select this action. One-time until: ms_w1_server_airlock_locker_looted. Authored outcomes (when event gates are met): 1 x Medkit; 1 x Wiring Bundle. In-room feedback: The emergency locker has been emptied.
- **inner door:** Inspect/select this action. In-room feedback: Heavy and reinforced. It keeps the sub-zero chill sealed inside Sector 4.

Aisle 01 (server_aisle1)

- **Exits:** South to Air-Lock Entrance (server_airlock); East to Cooling Unit B (server_cooling); North to The Core Hub (server_hub).
- **Authored enemies:** resonance_buoy, resonance_buoy. Moving enemies can make the actual encounter timing differ from the static room list.
- **server racks:** Inspect/select this action. In-room feedback: Blinking lights and the soft whirl of thousands of data-disks.
- **grate:** Inspect/select this action. In-room feedback: Industrial mesh reveals labeled power conduits one level below.

Cooling Unit B (server_cooling)

- **Exits:** West to Aisle 01 (server_aisle1).
- **bypass valve:** Inspect/select this action. One-time until: ms_w1_server_cooling_purged. In-room feedback: The refrigerant cycle has been purged.
- **thermal case:** Inspect/select this action. One-time until: ms_w1_server_cooling_looted. Authored outcomes (when event gates are met): 1 x Cryo-Inductor; 1 x Circuit Board. In-room feedback: The thermal case is open and empty.
- **fans:** Inspect/select this action. In-room feedback: Massive turbine fans roaring at maximum RPM.

The Core Hub (server_hub)

- **Exits:** South to Aisle 01 (server_aisle1); West to Backup Storage (server_backup); East to Admin Office (server_office).
- **terminal:** Inspect/select this action. Authored outcomes (when event gates are met): Start w1_sq04; Open Rebel Terminal dialogue. In-room feedback: A high-security interface. The rebel spoof is buried under Dominion compliance layers.
- **console:** Inspect/select this action. In-room feedback: The buttons are frozen stiff. You'll need to be careful with the input.
- **output ports:** Inspect/select this action.

Backup Storage (server_backup)

- **Exits:** East to The Core Hub (server_hub).
- **backup breaker box:** Toggle: Engage breaker / Disengage breaker. Leave the relevant light or power on while exploring.
- **archive terminal:** Inspect/select this action. In-room feedback: Dominion employee termination ledgers and suppressed union memos.
- **cases:** Inspect/select this action. One-time until: ms_w1_server_backup_looted. Authored outcomes (when event gates are met): 1 x Focus Conduit; 1 x Circuit Board; 2 x Scrap Metal. In-room feedback: The insulated server cases have already been raided.

Admin Office (server_office)

- **Exits:** West to The Core Hub (server_hub).
- **executive terminal:** Inspect/select this action. In-room feedback: Executive Log: 'Sector 4 anomaly identified as non-Dominion acoustic signal.'
- **audit datapads:** Inspect/select this action. One-time until: ms_w1_server_office_datapads_read. In-room feedback: The supervisor's quota audits have already been logged.

Crawlspace 4 (server_crawl)

- **Exits:** West to Air-Lock Entrance (server_airlock).
- **service junction:** Inspect/select this action. One-time until: ms_w1_server_crawl_bypassed. Authored outcomes (when event gates are met): 1 x Power Cell; 1 x Nano Filament. In-room feedback: The auxiliary power tap has been rerouted.
- **cables:** Inspect/select this action. In-room feedback: Thick insulated bundles pulsing with Dominion server traffic.

Deep Mine - entry: Elevator Landing (mine_landing)

Elevator Landing (mine_landing)

- **Exits:** South to Elevator Lobby (admin_elevator); North to Main Tunnel Alpha (mine_alpha).
- **lift:** Inspect/select this action. In-room feedback: Nova's badge still opens the lift back to Admin. The schedule has no return booked for her. Boggs expects the work finished first.
- **beacons:** Inspect/select this action. In-room feedback: Flickering amber lights warning of the hazards deeper in the sector.
- **machinery:** Inspect/select this action. In-room feedback: Massive drills and ore-crushers, currently silent during the shift-change.
- **drain pool:** Fishing zone colony_pit_drain; kit access is a later-world prerequisite here. Requires: ms_w2_pod_examined. In-room feedback: Hazard tape seals off the mineral drainage basin. Deep, stagnant runoff gathers beneath the safety beacons—too murky to fish without proper survival gear.

Main Tunnel Alpha (mine_alpha)

- **Exits:** South to Elevator Landing (mine_landing); North to Cavern Junction (mine_junction); East to Side Shunt 4 (mine_shunt).
- **Authored enemies:** echo_borer, echo_borer. Moving enemies can make the actual encounter timing differ from the static room list.
- **drills:** Inspect/select this action. In-room feedback: Colossal diamond-tipped bits, designed to chew through the canyon's hardest rock.
- **ore cart:** Inspect/select this action. In-room feedback: Empty and forgotten. A relic of a sector that ran dry years ago.

Side Shunt 4 (mine_shunt)

- **Exits:** West to Main Tunnel Alpha (mine_alpha).
- **resonant vein:** Inspect/select this action. One-time until: ms_w1_mine_shunt_mined. Authored outcomes (when event gates are met): 1 x Power Cell; 3 x Scrap Metal. In-room feedback: The resonant mineral vein has been harvested.
- **crew datapad:** Inspect/select this action. One-time until: ms_w1_sq05_completed. Appears after: ms_mine_power_on. Authored outcomes (when event gates are met): 1 x Recoil Dampener; 1 x Crew Datapad; 120 XP; Complete w1_sq05. In-room feedback: The final log of the lost shift has already been downloaded.

- **crates:** Inspect/select this action. In-room feedback: Splintered cargo crates crushed under ancient rockfall.
- **support beams:** Inspect/select this action. In-room feedback: Heavy timber and iron shoring groaning under canyon pressure.

Cavern Junction (mine_junction)

- **Exits:** South to Main Tunnel Alpha (mine_alpha); North to Riot Control Post (mine_checkpoint); East to Conveyor Belt (mine_conveyor); West to Sealed Munitions Stash (mine_sealed_munitions_vault).
- **West gate:** A reinforced Dominion blast bulkhead seals the western spur. Narrow-gauge rails end abruptly before the steel door. Required state: mine_junction: bulkhead_breached = True.
- **track diverter lever:** Toggle: Divert Track West / Reset Track Switch. Leave the relevant light or power on while exploring. In-room feedback: Heavy switch points connect the main line to the western incline siding.
- **junction breaker box:** Toggle: Restore power / Cut power. Leave the relevant light or power on while exploring. In-room feedback: The mounted junction breaker box routes auxiliary power to the surrounding mine tunnels.
- **switch rails:** Inspect/select this action.
- **wheel brake:** Inspect/select this action. Hides after: ms_w1_cart_track_diverted.

Sealed Munitions Stash (mine_sealed_munitions_vault)

- **Exits:** East to Cavern Junction (mine_junction).
- **dominion munitions cache:** Open the container once. Contents: Thermite Core Mod, Scrap Metal, Pure Iron.
- **shattered ore cart:** Inspect/select this action. The heavy iron cart rests wedged into the twisted bulkhead frame, its slag payload scattered across the stone floor in a heap of gray dust.

Conveyor Belt (mine_conveyor)

- **Exits:** West to Cavern Junction (mine_junction); North to Ore Sifter (mine_sifter).
- **conveyor belt:** Inspect/select this action. In-room feedback: A never-ending loop of industrial rubber.
- **motor:** Inspect/select this action. In-room feedback: Overheated and leaking oil. It's a miracle it's still running.

Riot Control Post (mine_checkpoint)

- **Exits:** South to Cavern Junction (mine_junction); West to Toxic Pocket (mine_gas).
- **Authored enemies:** acoustic_bulwark, dominion_dampener. Moving enemies can make the actual encounter timing differ from the static room list.
- **sentry post:** Inspect/select this action. In-room feedback: A Dominion outpost designed to keep the workers in line.
- **floodlights:** Inspect/select this action. In-room feedback: Blindingly bright, designed to disorient anyone attempting a breach.
- **shield:** Inspect/select this action. In-room feedback: A 'Bulwark' class riot shield. It's almost as tall as you are.

Ore Sifter (mine_sifter)

- **Exits:** South to Conveyor Belt (mine_conveyor); North to Deep Shoring (mine_shoring).
- **machinery:** Inspect/select this action. In-room feedback: Industrial sifters designed to catch even the smallest traces of Stellarium.
- **dust:** Inspect/select this action. In-room feedback: The air is thick enough to chew. Your suit's filter is working overtime.

- **strobes:** Inspect/select this action. In-room feedback: Flickering emergency lights, painting the room in staccato orange.

Toxic Pocket (mine_gas)

- **Exits:** East to Riot Control Post (mine_checkpoint).
- **pipe:** Inspect/select this action. In-room feedback: A gas-main that's been breached. The fumes are highly acidic.

Deep Shoring (mine_shoring)

- **Exits:** South to Ore Sifter (mine_sifter); North to Ancient Threshold (mine_threshold).
- **support beams:** Inspect/select this action. In-room feedback: Twisted and buckling under immense pressure.
- **debris:** Inspect/select this action. In-room feedback: A fresh collapse. You'll have to climb over the sharp edges to proceed.

Ancient Threshold (mine_threshold)

- **Exits:** South to Deep Shoring (mine_shoring); West to The Long Slope (mine_slope).
- **geometry:** Inspect/select this action. In-room feedback: The joints remain straight across corners where standard wall panels would need separate cuts.
- **walls:** Inspect/select this action. In-room feedback: Vibrating with a deep, subsonic rhythm.

The Long Slope (mine_slope)

- **Exits:** East to Ancient Threshold (mine_threshold); North to Echo Antechamber (mine_antechamber).
- **pillar:** Inspect/select this action. In-room feedback: A monolithic structure covered in symbols that seem to dance when you aren't looking.

Echo Antechamber (mine_antechamber)

- **Exits:** South to The Long Slope (mine_slope); North to Geometric Gap (echo_gap).
- **ceiling:** Inspect/select this action. In-room feedback: The nearest work light cannot reach the ceiling.
- **stone:** Inspect/select this action. In-room feedback: Smoother than any metal you've ever felt.

Echo Chamber - entry: Geometric Gap (echo_gap)

Geometric Gap (echo_gap)

- **Exits:** South to Echo Antechamber (mine_antechamber); North to Silent Walkway (echo_walkway).
- **stone:** Inspect/select this action. In-room feedback: Perfectly smooth and vibrating with a low, resonant frequency.
- **line:** Inspect/select this action. In-room feedback: The rock has been atomized, leaving a seam so fine it's almost invisible.

Silent Walkway (echo_walkway)

- **Exits:** South to Geometric Gap (echo_gap); North to The Heart (echo_heart).
- **walls:** Inspect/select this action. In-room feedback: The patterns are complex enough to make your head ache if you stare too long.
- **fractals:** Inspect/select this action. In-room feedback: Light trapped in stone, shifting and pulsing in a rhythm you can almost hear.

The Heart (echo_heart)

- **Exits:** South to Silent Walkway (echo_walkway); East to The Harmonic Well (echo_well); West to Signal Alcove (echo_memory); North to Emergency Exit (echo_exit).
- **tuning fork:** Puzzle w1_echo_counter_tune; full solution is in section 10. In-room feedback: Answer the repeating pulse with the cutter, cold loop, and suit ground.
- **geometry:** Inspect/select this action. In-room feedback: Cracked cradle blocks surround a calibration bus driven into the chamber floor.

The Harmonic Well (echo_well)

- **Exits:** West to The Heart (echo_heart).
- **mist:** Inspect/select this action. In-room feedback: It feels cool against your skin and carries the scent of a storm.

Signal Alcove (echo_memory)

- **Exits:** East to The Heart (echo_heart).
- **walls:** Inspect/select this action. In-room feedback: The surface is warm and slightly fuzzy to the touch.
- **static:** Inspect/select this action. In-room feedback: The static repeats at the cutter's bypass frequency.

Emergency Exit (echo_exit)

- **Exits:** South to The Heart (echo_heart); North to Maintenance Access (launch_access).
- **North gate:** The emergency latch has no calibration confirmation. Required state: echo_heart: relic_synced = True.
- **maintenance tunnel:** Inspect/select this action. In-room feedback: Red strobes mark the route. Containment doors are closing in sequence behind Nova.

Launch Bay - entry: Maintenance Access (launch_access)

Maintenance Access (launch_access)

- **Exits:** South to Emergency Exit (echo_exit); North to Cargo Lift (launch_lift); East to Gantry Level 1 (launch_gantry).
- **Authored enemies:** siren_skimmer, echo_borer. Moving enemies can make the actual encounter timing differ from the static room list.
- **conduits:** Inspect/select this action. In-room feedback: The conduits carry enough lockdown current to dim the work lights on each surge.
- **pipes:** Inspect/select this action. In-room feedback: The pipes clatter against loose brackets under emergency pressure.
- **lift:** Inspect/select this action. In-room feedback: The cargo lift is half-open while Zeke's spoof keeps the gate sensor in a service loop.

Gantry Level 1 (launch_gantry)

- **Exits:** West to Maintenance Access (launch_access); South to Refueling Bay (launch_fuel).
- **gantries:** Inspect/select this action. In-room feedback: Rickety and unsafe. Dominion's maintenance budget has been diverted elsewhere.
- **drums:** Inspect/select this action. In-room feedback: Highly explosive. A single spark would take out the whole level.

Refueling Bay (launch_fuel)

- **Exits:** North to Gantry Level 1 (launch_gantry).
- **propellant:** Inspect/select this action. In-room feedback: The scent is sharp and chemical, stinging your nostrils.
- **hose:** Inspect/select this action. In-room feedback: Thick and reinforced, built to handle the pressure of ship-grade fuel.

Cargo Lift (launch_lift)

- **Exits:** South to Maintenance Access (launch_access); North to Security Checkpoint B (launch_checkpoint).
- **Authored enemies:** acoustic_bulwark, resonance_buoy. Moving enemies can make the actual encounter timing differ from the static room list.
- **North gate:** A hostile Acoustic Bulwark blocks access to the security checkpoint.
- **override panel:** Inspect/select this action. In-room feedback: The lever pulls hard against the closing shutters. Someone has to hold it while the lift crosses. A wrench lies bent beside the housing.
- **hydraulics:** Inspect/select this action. In-room feedback: The hydraulics are failing under the strain of the lockdown, but they are still moving.
- **cargo lift:** Rest/recovery interaction; finish or dismiss its prompt before moving.

Security Checkpoint B (launch_checkpoint)

- **Exits:** South to Cargo Lift (launch_lift); North to Pod Bay (launch_bay).
- **Authored enemies:** dominion_dampener, resonance_buoy. Moving enemies can make the actual encounter timing differ from the static room list.
- **North gate:** A Dominion Dampener and security drone lock down the route to the pods.
- **checkpoint:** Inspect/select this action. In-room feedback: Automated turrets and scanning arches. You're in corporate-only territory now.
- **floodlights:** Inspect/select this action. In-room feedback: Searching for any movement. You'll need to be fast.

Pod Bay (launch_bay)

- **Exits:** South to Security Checkpoint B (launch_checkpoint); North to The Pod Core (launch_pod).
- **Authored enemies:** the_iron_warden. Moving enemies can make the actual encounter timing differ from the static room list.
- **North gate:** The Warden stands in front of the escape pod, blocking the access hatch. Required state: launch_bay: warden_defeated = True.
- **cargo rails:** Inspect/select this action. In-room feedback: Magnetic launchers designed to shoot ore into orbit. Dominion built them for cargo, not escape.
- **escape pod:** Inspect/select this action. In-room feedback: A cargo pod with life-support bolted in like an afterthought. It looks less like rescue than a chance.

The Pod Core (launch_pod)

- **Exits:** South to Pod Bay (launch_bay); North to Launch Rail (launch_rail).
- **pod:** Inspect/select this action. In-room feedback: The metal walls feel thin enough to poke a finger through.

- **navigation console:** Inspect/select this action. In-room feedback: The pod capacitors can power a launch. Jed's Chime fits the old authorization port; Zeke is checking how it connects to navigation.
- **speaker:** Inspect/select this action. In-room feedback: The countdown is deafening in the small space.

Launch Rail (launch_rail)

- **Exits:** South to The Pod Core (launch_pod).
- **rail:** Inspect/select this action. In-room feedback: A blur of motion and magnetic discharge.
- **viewport:** Inspect/select this action. In-room feedback: The colony drops to a point of orange light while shield warnings fill the glass.
- **planetary shield:** Inspect/select this action. In-room feedback: The shield rejects unauthorized traffic with enough force to break a cargo pod.

13. Journal objective checklist

These are the current authored objective strings. Compare with the route above if you are unsure what the game is waiting for. An optional task remaining unchecked does not necessarily prevent quest completion.

Wake Up Call (w1_mq01)

Stage: wake_in_the_pit

- [] Turn on the bunk light. (turn_on_bunk_light)
- [] Inspect the door control panel and open the door. (inspect_safety_fault)
- [] Find your way out of the Pit sleeping level. (leave_sleeping_level)

Stage: report_to_jed

- [] Find Jed in his bunk. (find_jed)
- [] Talk to Jed about the shift. (talk_to_jed)
- [] Reach Jed's place. (reach_workshop)
- [] Inspect the loader diagnostic strip. (inspect_loader_relay)
- [] Exploit the loader's exposed Shock weakness. (clear_faulted_loader)
- [] Receive your starter gear from Jed. (equip_starter_gear)
- [] Tinker the Functional Cryo-Inductor from the menu. (use_tinkering_table)
- [] Patch the Flux Liner and clamp its sacrificial ground strip. (patch_flux_liner)
- [] Deliberately confirm the cutter governor bypass. (confirm_governor_bypass)
- [] Run the live cutter test and wait for the fault log. (test_cutter)

Shift Clearance (w1_mq02)

Stage: reach_checkpoint

- [] Choose Transit Checkpoint on the hub map, then head north from the Shift Queue to the Search Bay for clearance. (approach_admin_gate)
- [] Let the scanner reject Nova so Zeke can reach the file. (request_clearance)

Stage: override_retirement

- [] Talk to Zeke in Zeke's Booth, east of the Search Bay. (meet_zeke)
- [] Choose the paperwork category Zeke can use to bury the liability flag. (spoof_liability_form)
- [] Take the temporary Mine Access Badge before the system notices the override. (receive_mine_access_badge)

The Echo (w1_mq03)

Stage: sector_four_assignment

- [] Cross into Logistics before the temporary override expires. (enter_logistics_sector)
- [] Report to Foreman Boggs in the Concourse Lobby and survive the work assignment he finds in Nova's file. (talk_to_bogs)

- [] With Boggs' authorization, head west to the Elevator Lobby. Choose Plan mine descent, then enter Deep Mine from the Logistics map. (use_deep_elevator)

Stage: deep_mine_descent

- [] Restore power at the Cavern Junction breaker box. (restore_deep_mine_power)
- [] Survive the first thing stirred up by the interference. (clear_first_mine_encounter)
- [] Optional: take the north detour from Cavern Junction to the Riot Control Post. Break the bulwark's Guard to reach the supplies beyond it. (break_riot_guard) - optional
- [] Follow the hum to the Architect threshold below Sector 4. (reach_architect_threshold)

Stage: relic_sync

- [] Step through the threshold into the impossible chamber. (reach_echo_chamber)
- [] Match the pulse spacing, balance the cold loop, then oppose the Fork's wave to quiet the combined signal. (touch_tuning_fork)
- [] Survive the calibration handshake and recover the Fork. (survive_source_sync)

Red Alert (w1_mq04)

Stage: lockdown_escape

- [] Survive the broadcast that names Nova as a containment threat. (survive_lockdown_broadcast)
- [] Follow Zeke's stolen comm route while the sector seals itself behind Nova. (follow_zeke_comms)
- [] Fight through the security teams collapsing on the escape route. (clear_escape_gauntlet)

Stage: cargo_lift_sacrifice

- [] Reach the Cargo Lift. (reach_cargo_lift)
- [] After clearing the Cargo Lift, talk to Jed to receive his Chime. (receive_chime)
- [] Run for the Launch Bay before Jed's opening closes. (escape_to_launch_bay)

The Launch (w1_mq05)

Stage: reach_pod_bay

- [] Fight through Launch Bay access before security reboots the route. (fight_through_launch_access)
- [] Reach the Pod Bay while Zeke keeps the hatch controls confused. (reach_pod_bay)

Stage: defeat_warden

- [] Survive the Warden's arrival. (survive_warden_intro)
- [] Break the Warden's guard. (break_warden_guard)
- [] Break the Warden's launch bay lockdown. (defeat_the_warden)

Stage: launch_pod

- [] Talk to Zeke in the Pod Bay, then follow him north into The Pod Core and talk again to splice the Chime into authorization/navigation. (splice_chime)
- [] After splicing the Chime, use the navigation console in The Pod Core to launch. (launch_from_colony)

- [] Survive the launch. (hit_planetary_shield)

The Scavenger's Stash (w1_sq01)

Stage: follow_scrapper_tip

- [] From Market Strip in Trade Row, head east to The Hidden Stash. (find_hidden_stash)
- [] Pry open the corroded seal on the old rebel cache. (open_rebel_cache)

Stage: return_to_scrapper

- [] Return west to Market Strip, then north to Scrapper's Stall with the cache proof. (return_cache_proof)

System Flush (w1_sq02)

Stage: clear_medbay_vents

- [] Head east from Triage Hall to the Ventilation Hub. (enter_ventilation_hub)
- [] Inspect the cracked vent housing leaking sulfuric fumes. (inspect_cracked_vent)
- [] After inspecting the cracked vent, use the fans to reroute airflow. (reroute_airflow)
- [] Clear the toxic blockage fouling the primary intake grate. (clear_toxic_blockage)

Stage: doc_turn_in

- [] Return west to Triage Hall, then north to Doc's Exam Room with the air quality report. (return_to_doc)

Heavy Lifting: Required Training (w1_sq03)

Stage: clear_cargo_collapse

- [] Report to Foreman Boggs in the Concourse Lobby. (talk_to_bogs)
- [] Optional workshop practice: start the loader at the Loading Dock. (start_loader) - optional
- [] Optional workshop practice: clear the cargo rail at the Loading Dock. (move_cargo) - optional

Stage: guard_break_training

- [] Learn Hydraulic Kick. (learn_hydraulic_kick)
- [] Enter the Security Post (East) and defeat the Shielded Trainer with Guard Break. (break_training_shield)
- [] Complete the drill. (rescue_trapped_workers)

Protocol Override (w1_sq04)

Stage: find_rebel_terminal

- [] Enter the Server Room. (enter_server_room)
- [] From Air-Lock Entrance, head north through Aisle 01 to The Core Hub and inspect the terminal. (locate_hacked_terminal)
- [] Thaw the frozen console controls. (restore_protocol_spoof)
- [] After thawing the console, read the output-port warning and use the terminal to recover the key without leaving an audit record. (apply_access_override)

The Lost Shift (w1_sq05)

Stage: trace_missing_shift

- [] Restore power at Cavern Junction, then return south to Main Tunnel Alpha and head east into Side Shunt 4. (find_collapsed_tunnel)
- [] Inspect the crew datapad in Side Shunt 4. (recover_datapad)
- [] Read the miner's final letter. (read_final_letter)

14. Quick recovery: where am I stuck?

- **Cannot leave the Pit:** turn on the bunk light, inspect the door controls, finish Jed's bunk conversation, and return to Pit Landing for the map exit.
- **Scrapper or Doc has no quest:** finish Wake Up Call first.
- **Workshop live test refuses:** craft the inductor, patch Flux Liner, confirm mining cutter, then use live cutter test. Let the cinematic finish.
- **Checkpoint rejects me:** talk to Hank, then choose Grid Instability with Zeke and finish the conversation.
- **Boggs will not authorize me:** complete the registered Security Post shield drill, then return to Boggs and finish the assignment conversation.
- **Cannot return to the map:** walk to the node's designated entrance listed in section 12.
- **Server terminal does not award Circuit Board:** terminal to discover quest, console to thaw, output ports to read warning, terminal again, then removable-board choice.
- **Mine rooms are dark / datapad missing:** turn on Cavern Junction power, then re-enter Side Shunt 4.
- **Cart does not breach the vault:** divert track west, then release wheel brake. Leave the diverter west until the breach occurs.
- **Fork confirmation disabled:** align the active waveform/control; hold each earlier stage before the next; final cancellation is opposite phase.
- **Emergency exit refuses:** complete the Fork handshake and its sync cinematic first.
- **No Chime at launch:** clear Cargo Lift and finish Jed's handoff.
- **Pod console locked after Warden:** Zeke in Pod Bay first, then Zeke in The Pod Core; console last.

If a completed prerequisite still does not unlock the next step, preserve a save and report the room ID, current journal stage/task, last action, and the exact rejection message. Do not edit your save to make the guide appear to work.

15. Playtest checks without interrupting the walkthrough

At each phase checkpoint, record: room, party HP, level, credits, healing supplies, completed quests, and the next objective. There is no guaranteed XP/credit total in this guide: optional battles, loot, purchases, and retreat can change it.

- Check the room title, dialogue, action labels, and menu text for clipping or tiny fonts.
- Note whether NPC personalities and directions remain clear, especially Zeke in the booth versus Pod Bay.
- Check a one-time cache a second time: no duplicate rewards.
- Save/reload after a light toggle, crafted inductor, side quest turn-in, cart breach, and Chime splice if you want persistence coverage.
- Keep intentional failures separate from your canonical route: save first, try a wrong choice, record feedback, then return to the correct path.
- At the World 2 crash, record whether World 1 felt too long, too abrupt, too demanding, or too easy. Functional completion is not the same as good pacing.

16. Source and review limits

Reviewed against current `rooms.json`, `quests.json`, `events.json`, `dialogue.json`, `hub_nodes.json`, `recipes_tinkering.json`, `tuning_puzzles.json`, and the exploration return-to-hub/travel implementation. Main route follows authored event prerequisites and current quest sequence. The room appendix is generated from the same assets to avoid silently omitting interactions. No game code, assets, or tests were changed/run for this documentation review. Device behavior, moving encounters, reward presentation, and pacing still need playtesting.
